

400kv Hadala Visit

On March 16, 2022, a group from the Electrical Engineering Department visited the 400 kV Substation in Hadala. This educational visit provided students with an in-depth look at high-voltage power systems and their operation. During the tour, participants observed key components of the substation, including transformers, switchgear, and control systems.

The visit also included discussions on safety protocols, maintenance practices, and the importance of substations in the power distribution network. Students gained practical insights into the challenges and technologies involved in managing high-voltage electricity, enhancing their understanding of the electrical engineering field. The experience fostered a greater appreciation for the role of substations in ensuring reliable power supply and infrastructure resilience.
